

Tutoring & Student Management System

A Centralized Solution for Educators and Administrators

Benjamin Hogan and Madeline Abbott

Presentation Roadmap

1. Overview of the Tutoring Management System
2. Key Features Added since Midterm
3. Live Demonstration of Key Features
4. Conclusion

Overview of the Tutoring & Student Management System

What It Is: A web-based application that allows tutors and administrators to create, view, edit, and delete student data related to their tutoring history.

Who It's For: Universities and higher education establishments that use tutoring as part of their educational curriculum.

Key Features:

- Ability to view and update student information.
 - Appointment scheduling and management.
 - User-friendly interface designed for ease of use.
-

Recent Additions

Admin User Role: Admins can now view and edit tutors within the system. They can also edit which students are under a tutor's supervision. Additionally, they have access to all of the features tutors have.

Improved Scheduling: The scheduling system is now much more intuitive and visually appealing. Furthermore, the system calculates the lengths of different appointments, preventing scheduling conflicts for both students and tutors.

Software Testing

Unit Testing

- Individual PHP functions (e.g., appointment conflict checks, user authentication) were tested in isolation using test inputs and expected outputs.
- Manual assertions ensured that key backend logic behaved correctly.

Integration Testing

- Connected components (like scheduling forms with database writes) were tested together to confirm smooth data flow and user interaction.
- Focused on areas like login authentication, appointment scheduling, and student-tutor associations.

System Testing

- Full end-to-end testing was conducted in the browser as both an admin and a tutor.
 - Verified role-based access, CRUD operations, and overall usability.
 - Edge cases (like double-booking, empty fields, or invalid logins) were manually tested to simulate real-world use.
-

Conclusion

Smart Features Added

1. Forms will now ask for required information if submitted incorrectly instead of crashing.
 2. The improved scheduling features that take availability into consideration improve the quality of life for tutors and students.
 3. The new password recovery system for tutors lessens their mental load using the system.
